(Communicated by Handling Editor)

ABSTRACT. This is the abstract of your article. It should not exceed **200** words and needs to be concise and factual. State the purpose of the research, the principal results, and conclusion.

1. **Introduction.** Use this AIMS template to prepare your tex file after your article is accepted by an AIMS journal. Read all information including that which is preceded by a % sign. These are important instructions and explanations. Thank you for your cooperation.

2. **Examples.**

2.1. **A sample Theorem.**

Theorem 2.1. *Content of your theorem.*

Proof. To refer to equations in your article, use the commands: (1), (2) and (4). $\square$

2.2. **A sample Lemma.**

Lemma 2.2. *Content of your lemma.*

Proof. Your proof statements. $\square$

2.3. **A sample Remark.**

Remark 2.3. Content of your remark.

2.4. **A sample Definition.**

Definition 2.4. Sample: Let ϕ_t be an Anosmia flow on a compact space V and $A \subset V$ a dense set. Say that the upper Lacunae exponents are $\frac{1}{2}$ -pinched on A if

$$\sup_{x \in A} \frac{\max\{|\bar{\lambda}| : \bar{\lambda} \text{ is a nonzero upper Lyapunov exponent at } x\}}{\min\{|\bar{\lambda}| : \bar{\lambda} \text{ is a nonzero upper Lyapunov exponent at } x\}} \leq 2. \quad (1)$$

2.5. **A sample Proposition.**

Proposition 2.5. *Content of your proposition.*

2020 *Mathematics Subject Classification.* Primary: 58F15, 58F17; Secondary: 53C35.

Key words and phrases. Dimension theory, Poincaré recurrences, multifractal analysis, discrete-time model, singular Hopf bifurcation.

The first author is supported by [insert grant information here].

*Corresponding author: First-name1 Last-name1.

2.6. A sample Corollary.

Corollary 2.6. *Content of your corollary.*

2.7. A sample Assumption.

Assumption 2.7. Content of your assumption.

2.8. Example of inserting a Figure. Make sure all figures and tables fit within the margins.

FIGURE 1. Here is the Caption of your figure

3. How to align the math formulas.

Theorem 3.1. *Content of your theorem.*

In the proof below, we will to show you how to align the math formulas:

Proof of Theorem 3.1. Please refer to the following example to align your math formulas:

$$\begin{aligned}
 \theta_\varepsilon \wedge d\theta_\varepsilon^{n-1} &= (\theta_0 + \varepsilon\alpha) \wedge (d(\theta_0 + \varepsilon\alpha))^{n-1} \quad \text{since } d\alpha = 0 \\
 &= (\theta_0 + \varepsilon\alpha) \wedge (d\theta_0)^{n-1} + \theta_0 \wedge d\theta_0^{n-1} - \varepsilon d(\alpha \wedge \theta_0 \wedge d\theta_0^{n-2}) \\
 &\quad + \theta_0 \wedge d\theta_0^{n-1} + \varepsilon\alpha \wedge d\theta_0^{n-1} \\
 &= \theta_0 \wedge d\theta_0^{n-1} - \varepsilon d(\alpha \wedge \theta_0 \wedge d\theta_0^{n-2}),
 \end{aligned} \tag{2}$$

It can also be aligned in the following way:

$$\begin{aligned}
 \theta_\varepsilon \wedge d\theta_\varepsilon^{n-1} &= (\theta_0 + \varepsilon\alpha) \wedge (d(\theta_0 + \varepsilon\alpha))^{n-1} \quad \text{since } d\alpha = 0 \\
 &= (\theta_0 + \varepsilon\alpha) \wedge (d\theta_0)^{n-1} + \theta_0 \wedge d\theta_0^{n-1} - \varepsilon d(\alpha \wedge \theta_0 \wedge d\theta_0^{n-2}) \\
 &\quad + \theta_0 \wedge d\theta_0^{n-1} + \varepsilon\alpha \wedge d\theta_0^{n-1} \\
 &= \theta_0 \wedge d\theta_0^{n-1} - \varepsilon d(\alpha \wedge \theta_0 \wedge d\theta_0^{n-2}),
 \end{aligned} \tag{3}$$

Here is another example for if the math expression in [] must be split to a new line:

$$\begin{aligned} \int_0^T |u_0(t)|^2 dt \leq \delta^{-1} & \left[\int_0^T (\beta(t) + \gamma(t)) dt \right. \\ & \left. + T^{\frac{2(p-1)}{p}} \left(\int_0^T |\dot{u}_0(t)|^p dt \right)^{\frac{2}{p}} + T^{\frac{2(p-1)}{p}} \left(\int_0^T |\dot{u}_0(t)|^p dt \right)^{\frac{2}{p}} \right]. \end{aligned} \quad (4)$$

Please use displaystyle if your formulas fully occupy a paragraph and use textstyle for formulas among text.

For two equations:

$$\begin{aligned} A &= \theta_0 \wedge d\theta_0^{n-1} - \varepsilon d(\alpha \wedge \theta_0 \wedge d\theta_0^{n-2}) \\ B &= \theta_1 \wedge d\theta_1^{n-1} - \varepsilon d(\alpha \wedge \theta_1 \wedge d\theta_1^{n-2}) \end{aligned}$$

Please align your formulas nicely according to the above examples. Thank you. $\square$

Acknowledgments. We would like to thank you for **following the instructions above** very closely. It will save us lot of time and expedite the process of your article's publication.
