

TEMPLATE FAQ

Please refer to AIMS_template.tex for detailed instructions and examples.

- **Can I use Overleaf to compile my article?**

- We suggest that you do not use the Overleaf LaTeX editor. AIMS associates use a professional-level software, and Overleaf can create issues when compiling an article. We prefer that you use MikTeX and the TeXWorks or WinEdt editor.

- **What do the `\usepackages` in the AIMS template do?**

- `\usepackage{amsmath}` - The standard mathematics package. This loads the necessary environments; equation, eqnarray, tables, figures, etc. **There is no need to define your own environments.**
- `\usepackage{paralist}` - Provides enumerate and itemized environments that can be used within paragraphs to format the items either as running text or as separate paragraphs with a preceding number or symbol. Also provides compacted versions of enumerate and itemize. You do not need to add these packages separately.
- `\usepackage{graphics, graphicx}` - For .eps and figure files to display correctly.
- `\usepackage{epstopdf}` - Allows .eps figures to compile in the .pdf document.
- `\usepackage[colorlinks=true]{hyperref}` - This package is necessary for citations and links to show correctly in the .pdf document.

- **Can I add `\usepackages` in my article?**

- If necessary for the compilation of your article, you may add `\usepackages`. Some commonly used `\usepackages` are listed below.
 - `\usepackage{amssymb}` - Loads extra symbols.
 - `\usepackage{amsthm}` - Provides a proof environment and extensions for the `\newtheorem` command.
 - `\usepackage{float}` - Improves the interface for defining floating objects such as figures and tables. Required for use of the [H] placement specifier for figures and tables.
 - `\usepackage{enumitem}` - Allows control over the layout of the three basic list environments: enumerate, itemize and description.

- **What is the purpose of Custom Commands?**

- This section determines the formatting of Theorems, Lemmas, Remarks, etc.

- Do not move, add, or remove any commands in this list because this can cause problems with the formatting.
- Use `\begin{}` and `\end{}` to insert these commands in your article. See `AIMS_template.tex` for examples.
- **What are 2020 MSC numbers?**
 - MSC stands for Mathematics Subject Classification.
 - You can find MSC numbers for your article here:
<https://mathscinet.ams.org/mathscinet/msc/msc2020.html>

If you still have questions about how to format or compile your article, please contact Cuixin Zhou at cxzhou@aimsciences.org.
